Change to recycling containers

100% commitment to the environment.

Try it. Like it.

WOLF PLASTICS Verpackungen (Packaging) GmbH is taking on a **leading role** in the area of environmentally friendly products and corresponding packaging material in the European market.

Searched for, found!

WOLF PLASTICS is your qualified and innovative partner when it comes to buckets made of recyclable material. **WOLF PLASTICS** never loses sight of our world. Here, best product quality also means sustainability. Researched and developed for the purpose of a successful future.

Make the change!

Change your **buckets to recyclable buckets**. The new buckets are grey-mottled due to the recycled raw materials and easy to distinguish visually from other containers. The visual appearance is just as attractive as white buckets, because the container made of recycle is, of course, also IML compatible. Any bucket that is not intended for the food sector can be purchased in the new recyclable version. As far as quality is concerned, there are no variations at all! The buckets are tested, of extremely high quality and do not affect the content in any way.

Try it. Like it.

At **WOLF PLASTICS** it makes us proud to be able to continue mutually on this path! Together we are making an active contribution to environmentalism. The environment will thank you for it.

The new recyclable range.

Up to 100% PCR.

WOLF PLASTICS is expanding its product range to include the "R" bucket.

It is available in almost all sizes and is comprised of at least 80% post consumer recyclable plastic. And it helps to achieve the ambitious EU – environmental objectives. Now it's up to the customer: "Try it. Like it."

Try it. 100 % robust

The "R" has excellent mechanical features. It is just as robust, airtight and durable as containers made of new material. It is, therefore, a sustainable and resource-efficient alternative with an improved eco-balance. Its CO₂ saving has a favourable effect on the customer's environmental record.

Try it. 100 % choice

All WOLF PLASTICS containers, buckets, canisters, cans etc can now be ordered in their recyclable version. That means they comprise at least 90% post-consumer-recyclable plastic. There is merely a restriction. **These buckets are not suitable for the food sector.** For the time being, in the food sector, you'll have to give the recycled version a miss. This type of bucket is, as already mentioned, ideal for environmentally aware customers in almost all non-food sectors.

Try it. 100 % eco-friendly

Why is the recyclable bucket being developed right now? It already exists in order to react to future EU objectives and to encourage climate protection. The obligatory use of recyclable material in the processing of plastics is, on the part of the EU, in the planning stage. Many speak of sustainability, but, especially in the plastics industry, the careful and sensitive way of dealing with raw materials and the environment is more important today than ever.

Try it. 100% environmentally certified

The WOLF PLASTICS recyclable bucket is comprised of an innovative raw material blend with a sustainable surplus value (90% PCR) that has been certified in accordance with the accredited EU Cert-Plast (European Certification of Plastic Recyclers). WOLF PLASTICS tests all buckets with 80% and 100% post consumer, recyclable material. In doing so, features such as stacking capacity, stability or vibration capacity are thoroughly evaluated. The recyclable bucket has already been certified in accordance with EUCertPlast.

Try it. 100 % Design

The new, grey "R" bucket is, of course, also IML compatible and that means it can be just as attractively designed as a new product. The label (plastic-label), that can display all colours, is placed in the mould. Following this, the molten PP (polypropylene) is injected into the casting mould. The plastic then melts with the label and on setting takes on the shape of the container. The IML- process also protects the environment: the packaging and the label consist of the same material and can, therefore, be fully recycled time and again. The base colour of the container can vary depending on how much PCR (Post-Consumer-Recyclate) is added to the new material. With an addition of 80% PCR a brighter colour tone is achieved than with a concentration of 100% recyclate.

Try it. Like it. 100 % Recycling

The "R" is immediately available, by request, in all sizes. WOLF PLASTICS calls on all its customers to switch to packaging made of recycled material, wherever possible. The non-food sector offers a broad application spectrum. They improve the environmental footprint of every company and are cost-neutral.

All in all, there are plenty of good reasons to check out the innovative, recyclable products and to love them:

"Try it. Like it." For the sake of the environment.

We never lose sight of our world.

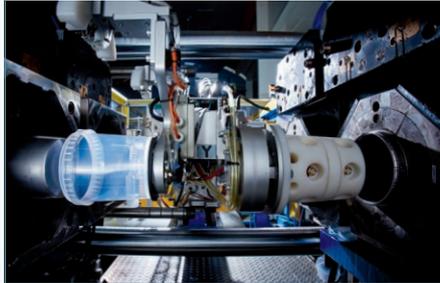

It's always about the future and our awareness of it. It's also about how to handle particular aspects. For WOLF PLASTICS the most important thing is to give a positive signal with every step we take. We are aware of our accountability and our standpoint is one that always takes account of our environment. And while we're on the subject: The truth is that it's always about never losing sight of the world. There is no other alternative.

WOLF PLASTICS:
Improved sustainability –
We give it our all.

We constantly try to ensure that our production process is as sustainable as possible. Water power is the primary energy source in our Austrian factory. Production waste is completely recycled in line with efficiency of resources. One important contribution to climate protection is the replacement of virgin materials (raw materials sourced from fossil resources) with recycle. This cuts down on greenhouse gas emissions. The potential saving can be as much as 2.2 kilograms of CO2 per kilogram of recycle that replaces virgin materials.

WOLF PLASTICS: Our
research and development
make the world a better place.

Thanks to the quality of our products, the flexibility of our services and our comprehensive solution-oriented service, we supply large-scale international customers. We are always open to new markets and are constantly checking their potential for our range of products and services. We grow as a result of meeting the requirements and assignments set by our customers. Our product development is characterised by our sustainable and ecological handling of raw materials.

WOLF PLASTICS: We live
out our best service
principle afresh every day.

Service does not start and end here. Service matters more to us. Service for us is something that brings us to be at the cutting edge of technology, it awakens our curiosity and our desire to move forward to ultimately be able to pass on the best quality. We have high expectations of ourselves. For us, service also involves exceeding expectations and fulfilling wishes. Sometimes that is easy and sometimes it isn't. And the best thing about service is, if it is always taken into account. That is how we see it – no other way.
