Bucket oval

Excerpt from the product catalog

WOLF PLASTICS:
Improved sustainability –
We give it our all.

White vests from grey buckets

Our customers are making increasing use of various types of grey container, partly to demonstrate the environmental awareness of their company as well as to upgrade their own climate footprint. WOLF PLASTICS packaging made from regranulate maintains the same high quality criteria in the non-food sector and can be produced in equally attractive designs. So recycling is twice as practical.

WOLF PLASTICS: We live
out our best service
principle afresh every day.

Colour choice without conscience

WOLF PLASTICS plastic packaging can be coloured as required and can still be delivered simply and quickly. There is a selection of 16 standard colours and innumerable colours in the Pantone range. An inspection sample shows the end result 1:1. All the surprises are positive as regards colour matching.

The oval buckets

You could say that the WOLF PLASTICS oval bucket is like the egg of Columbus; the single solution for all tasks. Food grade compliant, robust, air-tight and solvent-resistant, it can be used wherever it is needed. It is the favourite of the construction sector but also helps some delicatessens to make a perfect entrance into the market.

WOLF PLASTICS: Our research and development make the world a better place.

WOLF PLASTICS lids can be supplied as
 Shake-proof lid – particularly suitable for paint/cleaning
 Universal lid – our usual high standard of quality
 Waterproof lid – for optimum sealing
 Sealed lid – suitable for sealing film, ideal for use with foodstuffs
 All lids come with an optional opening tab. You can also request WOLF PLASTICS lids with the container of your choice as a sample, so that you can test it for yourself.

WOLF PLASTICS: Our research and development make the world a better place. 

„Shaking nose“ 

Stirred or shaken

WOLF PLASTICS lids withstand everything. Whether shaken or stirred, with or without closing tab. A special feature is the DO 1800-00, the so-called „shake-proof lid“. The shake-proof lid is mainly used in the construction industry. When colours are mixed, there are different types of application: stirring, biaxial mixing or shaking. The hardest requirement for the container is shaking, an up-down movement at certain speed levels and in different durations. The vibrating lid has a sealing lip on the inside, which adds to the seal and prevents paint from settling on the edge of the lid. WOLF PLASTICS has a patent for the so-called „shaking nose“.

New buckets stack well.

The stacking wonder with rounded corners

- stackable in 4 layers
- increased storage space
- fewer transport routes
- better stability

WOLF PLASTICS: We live
out our best service
principle afresh every day.

Protected design

The new WOLF PLASTICS bucket is protected by a utility model. Program logics and technical elements are researched for their relevance. The property rights apply both in Austria and in many EU states. Test the new bucket - request your sample copy!

The oval bucket **NEW** „Roundcorner“

WOLF PLASTICS always has its eye on customer needs, sometimes even before they arise. So the latest result of WP's research and development is always readily available: The „Roundcorner“ oval bucket, developed especially for the construction materials industry, where it is already in use.

It is particularly effective due to its increased stackability, and its static, cleverly thought-out trendy shape means that this innovative container can now be stacked in an unbelievable four layers. This adds up to not only an unbeatable saving on storage space but also fewer and more efficient transport routes.

From an ergonomic point of view this newcomer has a lot to offer; like the practical roller grip on the metal handle, for instance, which makes the bucket more comfortable to carry. Of course the „Roundcorner“ bucket oval has a lot to recommend it both internally and externally; i.e., it also comes in a wide range of colours and is of course IML-capable.

Buckets, oval „Roundcorner“ Greatest efficiency

Modern design

The „Roundcorner“ bucket is living proof that shapes can be developed further and what is already good can be made even better. Closely associated with this is its design, which in a subtle but noticeable way raises it above other containers.

Reduced stacking volume per pallet

Thanks to its new shape, the container can be stacked in four layers, which in turn leads to the practical advantage of reduced stacking volume per pallet. This also results in savings on pallets and thus a reduction in overall storage space.

Improved handling

Design follows function – the shape not only looks good, it also makes for an overall improvement in handling. It also makes planning and optimisation easier and facilitates the implementation of container streaming.

Improved fit on the tail-lift

Invisible at first glance: This container fits on the tail lift better, making it possible to speed up the unloading process.

Greater stability due to lower height

One point that became very obvious during the research and development phase was that due to lower height, the greater the stability that could be achieved and this would eliminate movement during transportation.

Optimised roller grip for handling

As soon as the container has been delivered and unloaded it is ready for use. The optimised roller grip makes it fast to pick up and saves more time in the work process.

„Rüttelnase“

The perfectly-designed, patented „Rüttelnase“ beaded rim protects the contents and provides the perfect closure for your contents.

IML

The Inmould- Labelling process enables packaging to be manufactured and labelled in one working process. This eliminates the need to store blank over-packaging, making storage and transport costs a thing of the past.

WOLF PLASTICS:
We live out our best
service principle afresh
every day.

Any colour on request

You can order any colour you like from the Pantone range from WOLF PLASTICS. Choose metallic, transparent or glitter - colour-coordinated with the different lid colours. Contact your personal WOLF PLASTICS representative or call directly

Example

WOLF PLASTICS:
Improved sustainability - We give it our all.

The booster for your environmental footprint

If our customers decide to go for recycled „grey“ alternatives instead of „new“ raw materials, the advantages are plain to see.

- ▮ same cost plus savings in valuable resources
- ▮ equally robust, sustainable and sealable as new plastic
- ▮ same design options, also IML-capable
- ▮ upgrade of environmental footprint due to massive savings in energy and CO₂.
